

LEAFPROOF® helps prevent damage from ice and snow

As pictured, ice and snow rests on top of LEAFPROOF®, but it will collect in an unprotected gutter. Eventually the ice and snow that has collected in a gutter will severely damage the gutter, soffit and fascia. The potential damage that will occur may greatly exceed the cost of the LEAFPROOF® installation.

As illustrated, products that are not installed under the shingles leave the roof edge exposed. Ice will collect in this area and will damage the roof edge, soffit and fascia in a manner similar to an unprotected gutter.

LEAFPROOF® ON A SLATE ROOF
